

Internet Safety Guidelines

Even though Internet Safety programs from district to district may be similar, each district should formulate their own programs according to specific needs and resources of that district. The program should be inclusive of but not limited to the following:

- Development and implementation of a process for reviewing, evaluating, and revising the Internet Safety program biennially

- A method by which inappropriate use by school district employees and students of the school district is prohibited

- Develop and implement a data and network security plan

- Develop and implement procedures to address breaches of Internet security and protect students' safety

- Establish appropriate measures to be taken against persons who violate the policy

- Integration of Internet safety in the k-12 curriculum and instruction

- Outreach programs to parents, grandparents, caregivers, and community stakeholders

- Professional development opportunities for teachers and staff across the district

- Safety, security, and ethics measures, including any that already exist
